

## Maintenance Boarding Stairway Dragline Services

### Product overview

Climbing on and off mining and construction equipment can sometimes be challenging due to the distance from the ground to the "first step". This is especially true on maintenance days when there is a requirement for frequent access to the dragline by personnel carrying tools and parts. Some maintenance technicians may also be inclined to toss their tools, equipment, supplies or parts on board before climbing aboard themselves, risking potential damage to these items in the process.

The P&H boarding stairway, adaptable for all brands of draglines, facilitates easier access and convenience for maintenance personnel, supervisors and others who may need to board the machine on those occasions when the machine is idled for maintenance.

### Description

The P&H boarding stairway is a true stairway featuring rugged construction with heavy duty handrails, self-cleaning treads and individually adjustable ground pads. Custom tailored for different brands, models and machine heights, the stairway is also designed to complement the existing stairways from the machine's shoe to the upper deck level.

An air control lever operates the cylinder for easy raising and lowering of the stairway and is further assisted by a counterweight. A protective guard helps shield the control components from damage. Ground contact pads are individually adjustable to provide a stable base for the ladder once on the ground.

### Installation

The time required to install the stairway and control system varies from one machine to another, but installations typically can be completed within two work shifts using a standard crew.

### Benefits and value

- Provides easy access from ground directly to deck level
- Facilitates carrying of tools and other items
- Adds convenience for maintenance personnel during extended maintenance periods
- Simple operation for raising and lowering stairway
- Available for all brands of draglines

The air-operated boarding stairway helps facilitate easier dragline boarding and dismounting, especially for maintenance personnel carrying tools, supplies and parts.
