## **Joy Global debuts new and improved hard rock mining truck**

Joy Global recently debuted its newest offering for the hard rock mining market: the Joy 16TD truck.

Based on the popular DT-1804 truck model, the 16TD features lower hood lines for improved visibility, a digital operator display, shorter turning radius, ground level maintenance and faster speed ramps. The 16TD is commercially available and replaces the DT-1804 model.

The first machine came off the line at the end of September and was set to debut at the Acapulco Mining Show held Oct. 7-10, but immediately sold to a customer.

“Our hard rock ready trucks and loaders are designed with operator safety, reliability and ease of maintenance in mind, and the 16TD was built to enhance those features,” said Josh Wagner, general manager of Joy Global Canada, where the new truck was produced.

Joy Global has an extensive product suite of hard rock equipment, including hydraulic jumbo drills, in-the-hole production drills, loaders and trucks. Its line of hydraulic jumbo drills for mining and tunneling use Montabert HC series drifters and Intelsense drilling controls. Joy hard rock loaders feature a wide variety of rated load capacities and are ideal for narrow vein applications. Joy trucks are designed for ground-level maintenance and reliability.

Joy Global Inc. is a worldwide leader in high-productivity mining solutions. Through its market-leading surface and underground business segments, the company manufactures and markets equipment and services for the global mining industry, from 150 locations in 20 countries.
