Hydraulics	
System design	
Variable displacement piston pump with load sensing open center circuit design for optimal efficiency. Proportional hydraulic valve with closed centre spool with priority steering, shock valves and load sense relief valves.	
Bucket/boom control	
Single 2 axis proportional electric joystick	
Steering control	
Single 1 axis proportional electric joystick with gear selector	
Brake system	
Service brakes are enclosed spring-applied, hydraulically released, liquid cooled multi-disk on all four wheel ends. The service brakes also function as emergency and park brakes. Brakes will apply upon loss of hydraulic pressure or electrical power.
