

Underground Hard Rock Jumbo Drills

Exceptional flexibility and innovation in a common platform

The ZJ21 jumbo shares one common platform with the ZB21 bolter enabling ease of conversion between the two machines

Usable face coverage
of up to **66m²**

Jumbo drill features and benefits

Designed for high uptime with optimal feed service intervals, ground-level maintenance and a new boom geometry that limits front-end damage

Improved operator adoption with simplified training on an easy-to-use, intuitive common control platform

Telescopic and fixed drilling feeds are durable, cost-effective and deliver outstanding drill performance and help to reduce daily maintenance

ZJ21 offers superior navigation in a 3 x 3 m (9 ft 10 in) heading
(with 16 ft drill steel option)
Boost output by pulling longer rounds in small headings

ROPS/FOPS-certified operator enclosures are designed with zero-harm, ergonomics and comfort in mind

Unique front-end geometry for **zero** interaction with operator enclosure, leveling jacks or carrier

The ZJ21 can even back up a 2-boom jumbo in larger development headings

Our product roadmap includes

14 New

jumbos and bolters scheduled to be launched in the coming years, including battery-powered models
