

Cable Bolt Feeder

The Joy cable bolt feeder top plate eliminates manual handling of large cable bolts, which can weigh in excess of 40kg, mechanizing the cable bolt feeding process. The Joy cable bolt feeder can reduce operator injuries commonly associated with continuous manual feeding.

The easily serviceable, removable drive wheel segments and easy access single location lubrication points reduce downtime for scheduled maintenance.

The cable feeder can be purchased individually and is retrofit-able underground to Joy HFX feed frames.

Performance and productivity

- Forward and reverse cable feed function
- No increase in top plate operational footprint to standard Joy top plate
- Reduces the number of operators required to feed a cable bolt from two to one operator
- Cable bolt feed time: ~8 seconds for an 8m cable bolt, significantly quicker than manual feeding
- Cable grip pressure control, providing enhanced compatibility for different cable bolt types

Ease of maintenance

- Easily accessible lubrication points for pivot points on front of top plate
- Replaceable drive wheel segments for ease of service on consumable components
- No additional hoses inside top plate cable bolt feeder to maintain

Safety

- No exposed pinch points and hazards clearly labeled
- Counterbalance valves for pinch cylinder and feed motor integrated in top plate allows external hoses to be de-energized while not in use. This also provides cable bolt emergency support in event of power outage or hose failure
- The Joy cable bolt feeder has been designed to MGD 35.1 and 41.
- Two hand control of cable feed function, with safety latch on cable grip function
